

Physics — Chapter 10

Light — Reflection and Refraction

Chapter Notes (Sample)

1. Reflection of Light

- Laws of reflection: angle of incidence = angle of reflection.
- Incident ray, reflected ray, and normal lie in the same plane.

2. Spherical Mirrors

- Concave mirror: converging mirror, real/virtual images depending on object position.
- Convex mirror: diverging mirror, always forms virtual, erect, diminished image.
- Mirror formula: $\frac{1}{v} + \frac{1}{u} = \frac{1}{f}$

3. Refraction of Light

- Bending of light when passing from one medium to another.
- Snell's Law: $n_1 \sin(\theta_1) = n_2 \sin(\theta_2)$

4. Refraction through a Lens

- Convex lens: converging; Concave lens: diverging.
- Lens formula: $\frac{1}{v} - \frac{1}{u} = \frac{1}{f}$
